"Cloning and nucleotide sequence of a cyclodextrin glycosyltransferase gene from the alkalophilic Bacillus 1-1.";

(In) Huber O., Szejtli J. (eds.);

Proceedings of the fourth international symposium on cyclodextrins, pp.71-76, Kluwer Academic Publishers, Dordrecht and Boston (1988).

-!- CATALYTIC ACTIVITY: Degrades starch to cyclodextrins by formation of a 1,4-alpha-D-glucosidic bond.

-!- COPACTOR: BINDS TWO CALCIUM IONS.

Mao Y., Xie Y., Jiang M.;

"CDNA Cloning of a novel human F-box protein.";

"CDNA (LOning of a novel human F-box protein.";

Submitted (NOV-2001) to the EMBL/GenBank/DDBJ databases.

-1- FUNCTION: Probably recognizes and binds to some phosphorylated proteins and promotes their ubiquitination and degradation.

-1- SUBUNIT: PART OF A SCF (SKP1-CULLIN-F-BOX) PROTEIN LIGASE COMPLEX
                                                                                                                                                                                                 01-FEB-1995 (Rel. 31, Last sequence update)

-I- COPACTOR: Binds 1 zinc ion per subunit (Probable).
-I- SUBCELLULAR LOCATION: Type I membrane protein.
-I- TISSUE SPECIFICITY: EXPRESSED ON NEUTROPHILS AND MONOCYTES.
-I- SIMILARITY: Belongs to peptidase family M12B.
-I- SIMILARITY: Contains 1 disintegrin domain.
-I- DATABASE: NAME=PROW; NOTE=CD guide CD156 entry;

C. -- FUNCTION: THIS MAGNESIUM DEPENDENT ENZYME CATALYZES THE HYDROLYSIS

CC OF ATP COUPLED WITH THE TRANSPORT OF PHOSPHOLIPIDS (POTENTIAL).

CC OF ATP COUPLED WITH THE TRANSPORT OF PHOSPHOLIPIDS (POTENTIAL).

CC --- CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.

C--- SUBCELLULAR LOCATION: Integral membrane protein.

CC --- SUBCELLULAR LOCATION: the cation transport ATPases family (P-type CC ATPases). Subfamily IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADK OR SMU.2005
                                                                                                                                                                                                                               runcylon. This small ubiquitous enzyme is essen maintenance and cell growth.

CATALYTIC ACTIVITY: ATP + AMP = ADP + ADP.
                                                                                                                                                     SUBUNIT: Monomer (By similarity).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the adenylate kinase family.
